PROFESSIONAL SUMMARY

Salesforce Certified Platform Developer I with 2.5+ years of hands-on Salesforce delivery experience (plus prior full-stack engineering background) building Apex, Lightning Web Components, and Flow-based solutions for Tata Consultancy Services on regulated healthcare accounts (GEHC, Baxter). Builds bulkified, governor-limit-safe Apex (trigger handler frameworks, Batch, Queueable) and secure REST/SOAP integrations, cutting manual operations by 30–40% while sustaining a stable, low-incident release cadence. Strong in OWD/sharing design, ServiceMax Field Service Management, and translating ambiguous stakeholder requirements into scalable technical solutions.

WORK EXPERIENCE

Salesforce Developer

Tata Consultancy Services (TCS) | GEHC & BAXTER

Nov 2023 - Present

- Engineered and delivered production Salesforce features using bulkified Apex (trigger handler pattern), Lightning Web Components, and declarative automation, reducing business process cycle times across 3+ enterprise production workflows.
- Automated end-to-end multi-step business processes using Salesforce Flows and Apex triggers, cutting manual operations by 30–40% and eliminating a recurring data-entry bottleneck.
- Configured and extended ServiceMax FSM scheduling and dispatch workflows, and wrote Apex to auto-assign work orders based on technician skill and territory rules, improving work order completion rate and technician utilization across the service organization.
- Built secure, governor-limit-safe REST/SOAP integrations (Named Credentials, OAuth) between Salesforce and external platforms, with Queueable-based retry/error-recovery logic and real-time data validation.
- Designed Salesforce data models, OWD/sharing rules, and security architecture — including field-level security enforcement in Apex — aligned with enterprise compliance standards and role-hierarchy best practices.
- Shipped 7+ production releases over 18 months with a low-incident track record, using structured Change Set/SFDX deployment pipelines, sandbox regression testing, and proactive incident triage.

Full Stack Developer | Web & Integrations

Sanjeev Technologies

May 2023 – Nov 2023

- Designed and deployed payment-integrated e-commerce platforms on WordPress and Shopify, implementing third-party REST API integrations, automated post-payment workflows, and transaction validation logic — foundational REST/webhook experience later applied to Salesforce Apex callout and integration design.
- Delivered 15+ live production systems with full ownership of deployment, monitoring, and incident resolution, and integrated platforms with Google Ads, LinkedIn Ads, and Meta Ads APIs to power lead-generation funnels for multiple clients.

KEY PROJECTS

Salesforce Lead Intelligence Platform | Apex + LWC + ML (In Progress)

- Building an end-to-end Salesforce Lead Intelligence system integrating Apex, LWC, and a Python/FastAPI ML microservice via async Apex and secure REST callouts.
- Developing a two-phase lead scoring engine — rule-based logic plus a Logistic Regression model — served through FastAPI.
- Creating a real-time, auto-refreshing LWC dashboard with Chart.js visualizations and dynamic styling.
- Implementing Apex test coverage using HttpCalloutMock to simulate success and failure scenarios.
- Designing Salesforce security (OWD, Profiles, Role Hierarchy) and a CLI-driven deployment workflow with package.xml versioning.

Enterprise Employee Management System | Apex, LWC, Flow, REST/OAuth, Agentforce

- Developed a Salesforce HR platform with 25+ custom objects and enterprise-grade field/record-level security (Profiles, OWD, Role Hierarchy, Sharing Rules).
- Built a layered Apex architecture (Trigger-Handler-Service-Selector) with bulk-safe triggers and 90%+ test coverage via bulk, negative, and mocked-callout tests.
- Automated core HR workflows using 15+ Flows and 5 multi-step Approval Processes with conditional and skip-level routing.
- Developed reusable Lightning Web Components and secure REST integrations using Named Credentials and OAuth 2.0.
- Built an Agentforce AI assistant with custom Topics and Invocable Apex Actions grounded in real, security-enforced Salesforce data.

TECHNICAL SKILLS

Salesforce Development: Apex (Triggers, Trigger Handler Frameworks, Batch/Queueable/Schedulable Apex, Async Apex), LWC, Visualforce, Flows, ServiceMax FSM, SOQL, SOSL, Governor Limits, Design Patterns, Salesforce Well-Architected Framework.

Security: OWD/Sharing Rules, Apex Managed Sharing, Role Hierarchy

Integrations: REST / SOAP, Platform Events, Change Data Capture, Named Credentials

DevOps: Salesforce DX (SFDX), Scratch Orgs, Agile/Scrum, Copado CI/CD, Git-based Deployments, Change Sets

Programming: C++, Java, JavaScript, Python, SQL

Platforms & Tools: WordPress, Shopify, Git, GitHub, JIRA, Postman, Salesforce CLI, Data Loader

EDUCATION QUALIFICATION

Bachelor of Engineering (B.E), Information Science and Engineering

East West Institute of Technology, Bengaluru | CGPA - 8.7

CERTIFICATIONS

- Salesforce Certified Platform Developer I
- Salesforce Certified Platform App Builder
- Salesforce Certified Administrator (SCA)
- Salesforce Certified AI Associate
- Copado Salesforce DevOps Certification
- ServiceMax Core Certification Administrator
- ServiceMax SVMX101 Certification
