PROFESSIONAL SUMMARY

Salesforce Developer with 3+ years of enterprise production experience at Tata Consultancy Services, delivering end-to-end platform solutions across Apex, LWC, Flows, and ServiceMax FSM. Architected scalable REST integrations and automated multi-step business workflows, reducing manual operations by 30–40%. Proven track record in production deployments, zero-downtime incident resolution, and translating complex stakeholder requirements into scalable Salesforce solutions. Salesforce Certified Administrator, App Builder, and AI Associate.

WORK EXPERIENCE

Salesforce Developer

Tata Consultancy Services (TCS) | GEHC & BAXTER

Nov 2023 - Present

- Engineered and delivered custom Salesforce modules using Apex, LWC, and declarative automation, reducing business process cycle times across 3+ enterprise production workflows.
- Automated end-to-end multi-step business processes using Salesforce Flows and Apex triggers, cutting manual operations by 30–40% and eliminating a recurring data-entry bottleneck.
- Architected and maintained ServiceMax FSM workflows for field service operations, improving work order completion rate and technician utilization across the service organisation.
- Built secure, governor-limit-safe REST integrations between Salesforce and external platforms, handling authentication, named credentials, error recovery, and real-time data validation.
- Designed Salesforce data models, OWD/sharing rules, and security architecture aligned with enterprise compliance standards and role-hierarchy best practices.
- Maintained 100% production uptime across multiple release cycles through structured deployment pipelines (Change Sets, Salesforce CLI), sandbox testing, and proactive incident resolution.
- Collaborated with product owners and cross-functional stakeholders to translate ambiguous business requirements into technical specifications and Agile delivery roadmaps.

Full Stack Developer - Web & Integrations

Sanjeev Technologies

May 2023 – Nov 2023

- Designed and deployed payment-integrated e-commerce platforms on WordPress and Shopify, implementing third-party API integrations, automated post-payment workflows, and transaction validation logic — directly applicable to Salesforce integration architecture.
- Delivered 15+ live production systems with full ownership of deployment, monitoring, and incident resolution, reinforcing the end-to-end delivery discipline now applied in Salesforce role at TCS.
- Integrated platforms with Google Ads, LinkedIn Ads, and Meta Ads APIs to power lead generation funnels, improving inbound pipeline performance for multiple clients.
- Managed multi-project delivery pipelines, tracking dependencies and deadlines across teams — experience directly transferred to stakeholder management and Agile delivery.

Research Associate (Part-Time - Remote)

St. Petersburg University

Sep 2021 - May 2023

- Published research on 'Eye Emotion Recognition with Hybrid Intelligence,' applying ML data pipelines and analytical thinking subsequently embedded in production system design.
- Contributed to high-level technical presentations, strengthening communication skills applied to stakeholder workshops and solution walkthroughs.

KEY PROJECTS

Salesforce & Integration Projects

Smart Lead Scoring Dashboard — LWC + Apex + ML REST Integration

- Engineered a real-time Lightning Web Component dashboard that surfaces ranked lead prospects by consuming an external machine-learning REST API via Apex callouts — eliminating manual lead prioritisation and enabling sales reps to act on the highest-value opportunities first.
- Implemented Apex controller logic to authenticate, invoke, and parse ML scoring API responses, mapping returned scores to Lead records with field-level security enforcement and SOQL-with-sharing, ensuring governor-limit-safe execution across bulk lead volumes.
- Built automated follow-up task creation triggered on lead score thresholds using Salesforce Flows, reducing average lead response time and ensuring no high-score prospect fell through without an assigned action.
- Optimised LWC component performance through debounced server calls, client-side caching of score results, and conditional rendering — delivering a sub-second refresh cycle for live dashboard updates.

ERP ↔ Salesforce Bidirectional Data Sync — SAP Integration

- Delivered a bidirectional data sync solution between SAP ERP and Salesforce using Apex REST callouts and inbound REST API endpoints, keeping Account, Order, and Product records consistent across both platforms in near real-time.
- Designed a Custom Metadata-driven field mapping framework, allowing administrators to configure SAP-to-Salesforce field translations without code changes — reducing future maintenance overhead and enabling rapid schema updates.
- Built a robust error handling and retry architecture using Queueable Apex with exponential back-off, persisting failed sync payloads to a custom error log object with alerting via Platform Events — achieving a 99%+ successful sync rate across production loads.
- Defined Named Credentials and auth provider configuration for secure SAP endpoint connectivity, and implemented idempotency checks to prevent duplicate record creation during retry cycles.

TECHNICAL SKILLS

Salesforce Development: Apex, LWC, Visualforce, Flows, Process Automation, CPQ, ServiceMax FSM, SOQL, SOSL, Governor Limits, OWD/Sharing Rules, Metadata API, Change Sets, Data Loader, Sandbox Management

Integrations: REST / SOAP, OpenAI API, Google Ads API, Meta Ads API, Payment Gateways.

Dev Practises: Agile / Scrum, Copado CI/CD, Git-based Deployments, Apex Unit Testing (Test Classes)

Programming: C++, Java, JavaScript, Python, SQL

Platforms: WordPress, Shopify

Tools: Git, GitHub, JIRA, Postman, Salesforce CLI

EDUCATION QUALIFICATION

Bachelor of Engineering (B.E), Information Science and Engineering

East West Institute of Technology, Bengaluru | CGPA - 8.7

CERTIFICATIONS

- Copado Salesforce DevOps Certification
- Salesforce Certified Platform App Builder
- Salesforce Certified AI Associate
- Salesforce Certified Administrator (SCA)
- ServiceMax Core Certification Administrator
- ServiceMax - SVMX101 Certification
